SAP Business One Notes

SAP **1712816 - Widgets developed with SDK cannot be re-sized**

Version 3 **Validity:**
20.08.2012 - active　　　　　　**Language** English

Symptom

The behavior of the resize event for widgets created using SAP Business One's SDK is not aligned with the behavior of ordinary forms in SAP Business One.

Currently the resize event is not working for widgets resulting for example in the overlapping of widgets followed by an unexpected shutdown of the application.

Since the resize event is currently not usable, it may also affect third-party created widgets.

Reproducing the issue

Scenario:

You develop a widget with SAP Business One's SDK & acitvate it within the cockpit.

You resize the widget window.

Expected behavior:

The widget window & it's content are resized, the application works as normal.

Actual behavior:

The widget windows can overlap, the content of the window is not resized, the cockpit may become unstable & SAP Business One may unexpectedly shut down.

Cause

Limitation

Solution

SAP intends to provide a patch or patches in order to solve the problem described.
The section **Reference to Related Notes** below will list the specific patches once they become available.

The corresponding **Info** file of the patches in SAP Service Marketplace will also show the SAP Note number.
Be aware that these references can only be set at patch release date.
SAP will deliver patches only for selected releases at its own discretion, based on the business impact and the complexity of the implementation.

Header Data

Released On	14.12.2012 09:28:54
Release Status	Released for Customer
Component	SBO-SDK Software Development Kit
Other Components	SBO-INT-CKP Cockpit
Priority	Correction with medium priority
Category	Help for error analysis
