

Symptom

Starting multiple addons simultaneously results in an error message: **Connection string is not valid. [66000-84]**.

Reproducing the issue

Scenario:

1. In the *Add-On Manager* window, select more than one installed addon.
2. Choose *Start* to start all selected addons.

Expected Behavior:

All selected addons are started successfully.

Actual Behavior:

An error message appears for a random addon: **Connection string is not valid. [66000-84]**.

Cause

Application Error

Solution

SAP intends to provide patches in order to solve described problem.

The section **References** below will list the specific Patches when available.

The corresponding **Info** file of Patches on SAP Service Marketplace will show the correction / SAP Note number also.

Be aware that these references can only be set at Patch release date.

SAP will deliver Patches only for selected Releases at its own discretion, based on the business impact and the complexity of the implementation.
